

DC

High-Quality Power Supply

LED Indicators

+12V and -12V LEDs show each rail is active and stable, with no short circuits.

On / Off Switch

Controls power with a red LED indicating on/off status.

In / Out

Power input and mirrored output for system expansion.

A compact powerful low-noise Eurorack power supply delivering +12V / 2000mA and -12V / 1500mA with just 1% stability across the full load range. Powered by 24V DC (20V–28V compatible), it ensures reliable and clean operation for even the most demanding setups.

Recommendation: For optimal results, we advise using only the 24V DC adapters certified by our engineers. Third-party power supplies may work, but we can't guarantee peak performance or reliability.
