## High-Quality Balanced Input

### dBu Meter

Indicates the output signal level independently for the left and right channels, ranging from -12 to +18 dBu.

### Gain

Adjusts the input signal level. Turn it clockwise to boost the level by up to +20 dB;

### Inputs & Outputs:

Route the signal into the device using balanced 6.35 mm (1/4-inch) TRS jacks for the input and unbalanced 3.5 mm (1/8-inch) TS jacks for the output. This setup ensures low noise, minimal interference, and high-quality signal transmission;

Built with high-quality components from THAT Corporation, the device delivers ultra-low noise performance and an exceptional dynamic range. This ensures pristine audio quality, making it ideal for professional studio and live applications;
